# **Lesson8 - Ingress-Nginx-Controller**

In the previous lesson we deployed .NET core web application with IP address and port - localhost:8080. In order to deploy the .NET core web application with DNS (Domain Name Server) instead of IP address and port and add SSL/TLS we will use Ingress-Nginx-Controller.

### **Deploy Ingress-Nginx-Controller to Kuberneties cluster**

Create ingress-nginx-deployment.yml in manifests folder, open the URL - <a href="https://raw.githubusercontent.com/kubernetes/ingress-nginx/controller-0.32.0/deploy/static/provider/cloud/deploy.yaml">https://raw.githubusercontent.com/kubernetes/ingress-nginx/controller-0.32.0/deploy/static/provider/cloud/deploy.yaml</a> and copy the content into the YML file.

```
